carefree cycling

AXA BIKE

Move freely wherever you want to go

AXA BIKE was founded over 120 years ago and is based in the Netherlands and is inextricably linked to cycling culture. Therefore, AXA BIKE feels a strong responsibility to contribute to a safer and free world with their knowledge and experience.

We believe that cycling is not just about securing your bike; it's about the journeys you take, the destinations you reach, and the moments shared with others along the way. By delivering proven technology and exceptional service, AXA BIKE wants to ensure every cyclist feels secure and supported, riding without fear, fully embracing the freedom of cycling. AXA BIKE is here for you, with smart locks and lights solutions that help you move forward and offer security.

Ride with confidence, ride with AXA BIKE

Our engineers work daily on the strongest and most modern lock designs and new light solutions according to international standards. Always focusing on cyclist needs: user-friendliness and safety. Bicycle thieves and burglars are getting smarter, but our engineers always stay one step ahead. In addition to that it is the dedication of our lighting engineers to ensure cyclists are safe on the road, both day and night. With this commitment to make cycling safe and accessible for everyone AXA BIKE stands for responsibility and makes sure people can fully enjoy cycling without worries.

We are always available

For information about our products or other issues please call one of our retail specialists: **+31 (0)318 536 220** or send an e-mail to; **info.axa.bike@allegion.com**

Shelf advise

For the bicycle dealer, we offer solutions for a well organized shop design. We like to help you to present your shop as well as possible. There are various display modules available which stimulate upselling.

AXA BIKE in a nutshell

- For solution-seeking casual riders and practical commuters
- Offering the most reliable solutions for daily commutes and leisure activities
- Providing peace of mind by understanding the deeper needs of cyclists
- Well known and trusted brand for high-quality locks, lighting, and GPS trackers
- Wide range of products for every type of bike and environment
- Sustainable retail packaging

Wherever you want to go. Whatever you cycle on. AXA BIKE makes sure you can move freely and go wherever you want. Enjoy the moment. AXA BIKE takes care of the rest.

‘You opt for AXA, you opt for safety!’

Choose the right safety level

To help you understand your choice AXA BIKE classifies locks by security level. Level 1 represents the lightest cable lock with level 15 offering ultimate protection for your bike. These locks are often approved by 3rd party testing agencies, and are therefore a preferred option when taking out bike insurance.

Standard safety

Safety level 1 to 6

Locks with a security level between 1 and 6 are more suited when securing your bike for a short time, in an area where there is a lot of activity and the chance of theft is low.

Advanced safety

Safety level 7 to 10

These locks are perfect to use as a second lock for bikes that are parked at school or at a very busy place. Bike thieves often have 1 specialism so they are more likely to leave a bike with two locks.

Premium safety

Safety level 11 to 15

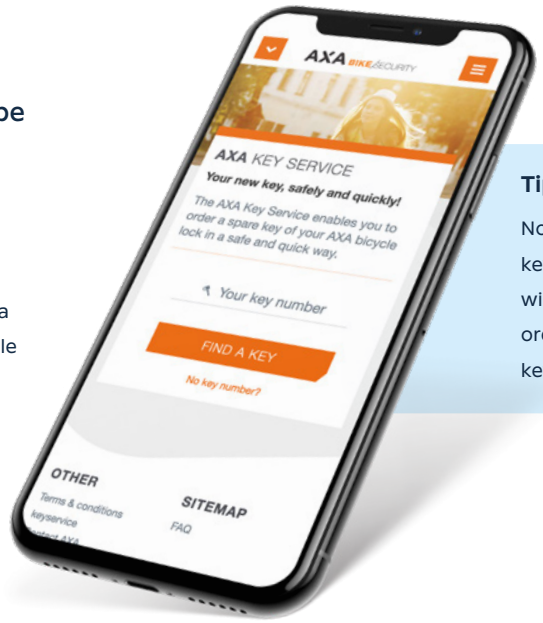

These locks are all approved and are a preferred option considering bike insurance. These locks are very strong and reduce the chance of theft immensely. They can be used for expensive bikes that are parked for a longer time or in the city.

Your new key, safely and quickly

Video

It can happen that someone lost his bicycle key. This is not a problem! An extra key can be ordered via our key service website.

Tip:

Note down your key number, you will need it when ordering a new key.

An extra key can be ordered through: **axabike.com**

Within a few days, you will have the new key at home. As a dealer, you can create your own account and order multiple keys at once. There are various payment options for a smooth ordering process.

Approvals

ART-quality mark

Our locks are mostly ART approved. This makes them suitable for closing a bike insurance in the Netherlands and Belgium. The more stars a lock has, the higher the preventive value of the lock and it ensures you that the risk of theft decreases significantly.

European approvals

Requirements on approvals can differ per country, based on variables such as used theft methods and weather conditions. Check the website for the up to date status on approved locks of the institute for your country.

Look to the future

AXA BIKE is firmly rooted in the Netherlands, a country with more bikes than people. We're proud of that history, but most of all we're focused on the future. That's why we aim to minimise our environmental impact.

More environmentally friendly

Making our store packaging sustainable is part of our roadmap towards more environmentally friendly operations. All products now come in new packaging. Step by step this will also appear on the shelves. This running change prevents waste; we want to avoid the destruction of old packaging stocks, as this runs contrary to our green ambitions.

2.3
million
Packaging items annually

5
million
Plastic tie wraps replaced

1
million
Plastic bags replaced

Principles

- Single-use plastics such as tie wraps and bags will be replaced by recyclable paper alternatives
- The cardboard is no longer laminated, which makes it fully recyclable
- The cardboard comes from sustainable sources

Fast information

A unique QR code is shown on each packaging item. This links to the product page, where all information about the product can be found, including the user manual.

Fully recyclable

Every aspect of our packaging has been carefully considered to ensure it is fully recyclable, without reducing the level of protection of the product during transport and when presented in stores.

Separate price list for old article numbers and GTIN codes

To ensure a smooth transition from old to new packaging, we are required to use new article numbers and GTIN codes on the new packaging. This ensures that the product flows in our warehouses and those of our customers remain separate. In this AXA BIKE product brochure, you will only find the new article numbers and GTIN codes. Do you need the old numbers? Then use the separate price list, which lists the old and new numbers side by side. The barcodes in the price list show the old GTIN codes. You can find the price list here: **axabikesecurity.com/downloads**

AXA E-bike product range

Let yourself be seen, light your bike!

We regularly see cyclists riding without lights. They think they will be seen, but without lights they're not or hardly visible.

Check the voltage

For E-bikes, we have special lighting that can be connected to the battery of the E-bike. Every E-bike has a different voltage battery. So it's important to check the voltage before purchasing new lighting.

Protect your bike with the right lock!

Many bicycles are still (too) often inadequately secured. A good lock is essential to prevent theft, but not every lock is suitable for every situation. From sturdy chain locks to compact folding locks, there are many options for keeping your bike safe. Make sure your bike is well protected!

Anchor your E-bike to a fixed object

It is very important to anchor your E-bike with a 2nd lock to a fixed object. Such as a bicycle rack, lamppost or a fence. The combination of an approved ring lock and a chain makes it impossible to move your E-bike to a remote place in order to break the locks.

Ring locks

- ART 2, Sold Secure Gold, SBSC and FA approved

Always use a 2nd lock

The importance of a 2nd lock is often underestimated. Breaking open 2 locks with a separate cylinder takes too much time for a bicycle thief. As a result, bicycle thieves will ignore your E-bike sooner than a bicycle without a 2nd lock. Always fasten the 2nd lock high on your E-bike and not on the ground, this allows less force to be applied in the event of an attempted theft.

Secure the ring lock to the fixed world

Many of our ring locks are equipped with the possibility to include a plug-in chain or cable. With this plug-in chain the bicycle can be connected to the fixed world. This is an additional barrier for bike thieves since they can not easily move your bicycle to a less visible area to break the lock.

Which plug-in chain or cable fits on what ring lock?

	Plug-in chains		Plug-in cables

ⓘ Retractable

You will see the term ‘retractable’ on certain ring locks. What does this mean?.

As standard, AXA BIKE supplies its ring locks with a non-removable key (‘non retractable’). This means that if the lock is unlocked, you can never remove the key from the lock. This is the most commonly used version in the Benelux. ‘Retractable’ indicates that it is a variant in which you can remove the key from the lock in both the unlocked and locked state. We often see this method in large parts of Scandinavia and German-speaking areas. Retractable locks are never ART approved and therefore not suitable for insurance in the Netherlands and Belgie.

Please note: Insurers’ requirements regarding ‘retractable’ and ‘non retractable’ differ per country.

Choose the right light

In the AXA BIKE product range brochure different terms are used to term product features. In order to be able to make a good estimate of the product you need, it is therefore useful to know what these terms means. Below you can find a brief description of some product features.

Light output

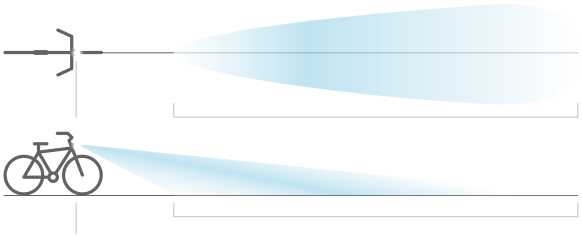

10 LUX

In the lighting industry, there are two terms that can be used to indicate the brightness of a light, namely Lux and Lumen.

What is the difference between Lux and Lumen?

In the lighting industry, there are two terms that can be used to indicate the brightness of a light, namely Lux and Lumen. The difference between Lux and Lumen is the way the amount of light is measured. Lumen is the amount of light which the light emits from the source per time unit, regardless of where the light radiates. Lux, on the other hand, is the amount of light that falls on a surface, for example on a square meter.

At AXA BIKE, the number of Lux of a lamp is mentioned on almost all products. This term indicates how much light is projected onto the road and therefore how much visibility you experience. The exception confirms the rule: the AXA Niteline 550 and the AXA Niteline 300 are headlights with Lumen. Suitable for wide light dispersion, such as when cycling in a forest.

Lumen
Amount of light the light emits

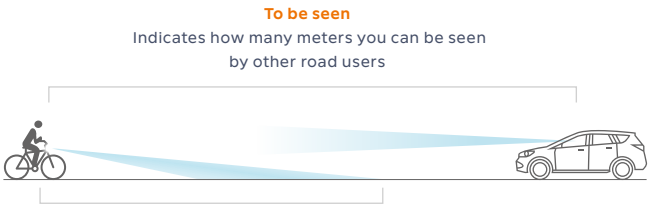

Lux
Amount of light the light emits visible on the road per 1 m2

What does 'To see' and 'To be seen' stand for?

When you are cycling and participating in traffic, it is important to both see well by yourself, as to be seen by other road users. For this reason in this brochure a distinction is made between ''To see'' and ''To be seen''.

"To see" indicates how far you can see with the lighting by yourself. This lighting is mainly used by cyclists who are often cycling on poorly lit roads and use the light to have a good view of the road.

"To be seen" indicates how many meters you can be seen by other road users. This lighting is especially useful when you are cycling in the city and want to be seen on well-lit roads.

To be seen
Indicates how many meters you can be seen by other road users

To see
Indicates how far you can see with the lighting by yourself

Steady light function

Different dynamo front and rear lights are equipped with the steady light function and it ensures that your bicycle light keeps shining up to 4 minutes when stopping for example at a traffic light. This provides additional visibility on the road, even if you don't ride!

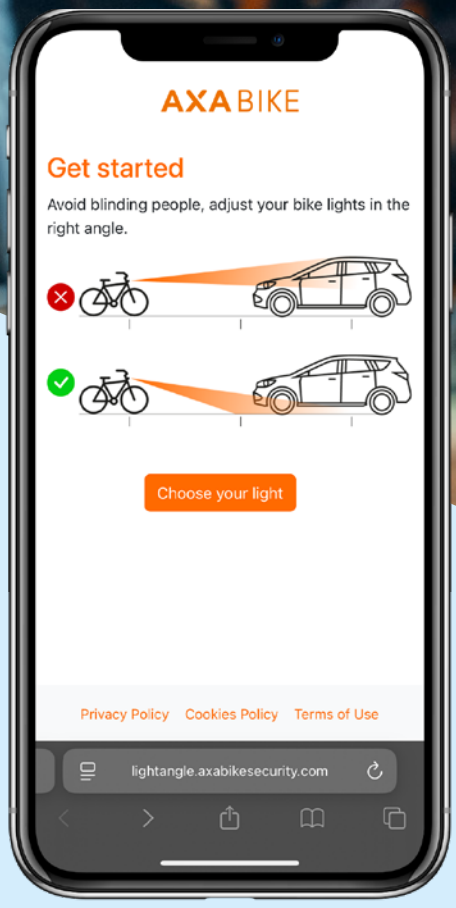

Daytime safety light

AXA BIKE's daytime safety light not only ensures good visibility in the evening, but also good visibility during the day. AXA BIKE's daytime safety light offers you this security because during the day, two extra bright Led's make sure you remains visible even with sunlight.

Don’t blind your oncoming traffic!

Use our lighting app to adjust your AXA BIKE lights to the correct angle. The app cleverly uses the level in your phone. The correct number of degrees is added for each light. So your customers participate safely in traffic and don’t blind their oncoming traffic.
What a service!

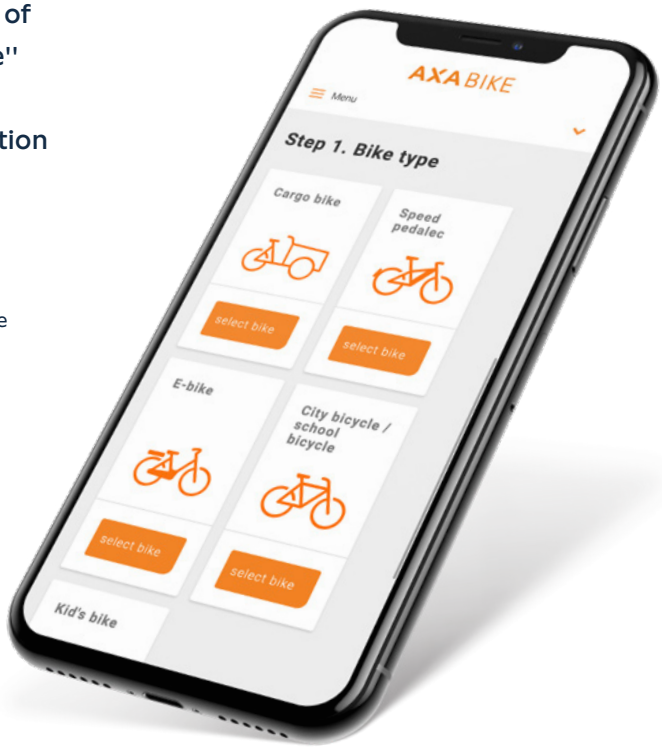

Always recommend the right bicycle light!

We are happy to help you with advice on the best bicycle light. AXA BIKE has a wide range of lighting products, from very powerful "to see" lights, to widely visible and safe "to be seen" lights. AXA BIKE has the perfect lighting solution for each bicycle and cyclist.

To make it easy for you, we have created the bicycle light selector. This online tool takes you in three steps to a choice that is tailored to your specific needs.

Scan the QR-code to get started!

National certifications

AXA BIKE offers a wide range of high-quality bicycle lighting. In this catalog, you will see the mention of the German StVZO or French Approval certification for various products. A brief explanation is provided below.

StVZO

The StVZO is the German road traffic regulation that sets special requirements for bicycle lighting. In Germany, the use of bicycle lighting that complies with the StVZO requirements is legally mandatory. This means that if you cycle in Germany, you must use a bicycle light that meets these regulations. However, it is also advisable to use a bicycle light that meets these requirements even if you are not cycling in Germany.

French Approval

Similar to the German regulations, in France, there is the “Code de la route” for bicycles. Just like in Germany, bicycle lighting in France is tested in an independent laboratory, and a bicycle light with approval complies with the French legal requirements.

RKF certification

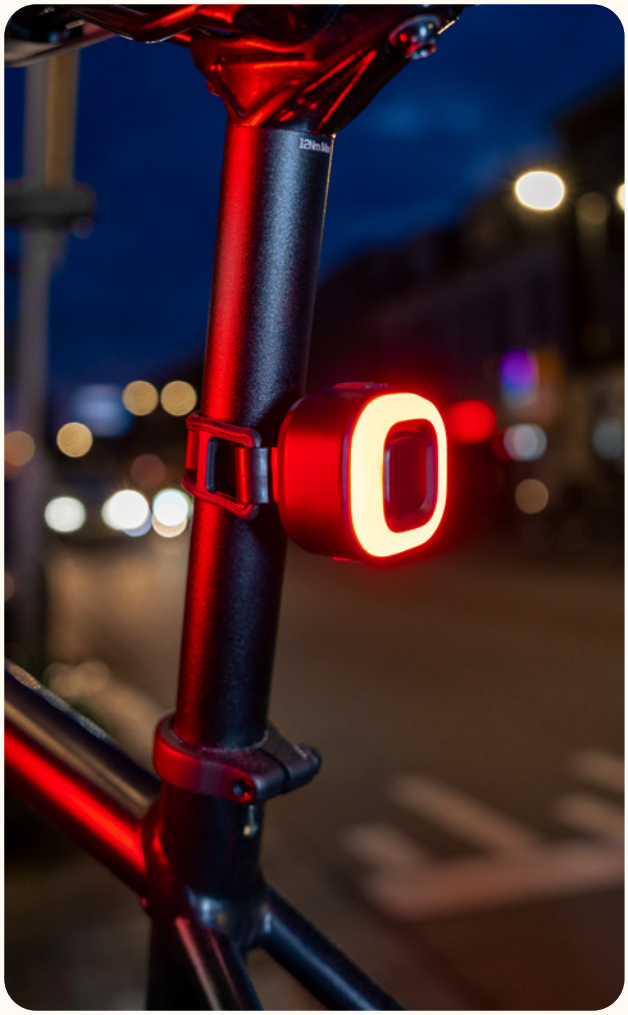

In the Netherlands, we use the RKF certification. This certification provides clarity in the maze of bicycle lighting. It indicates that the lighting not only ensures that you are seen but also allows you to see well. The AXA bicycle lighting with the StVZO certification meets the requirements of the RKF certification.

Compliance as the foundation of modern bicycle lighting

The requirements for bicycle lighting are evolving rapidly. What was considered sufficient just a few years ago no longer always meets current market expectations. Stricter regulations, the growth of e-bikes, and an increasing focus on road safety are making compliance an ever more important factor in the development of new lighting solutions.

At the same time, a single European standard cannot be taken for granted. Different countries apply additional requirements, making knowledge of local regulations a key consideration in both product development and portfolio management.

European market, local differences

Although the European market continues to harmonize, national regulations still play an important role.

Germany has long been one of the most influential reference markets for bicycle lighting. The well-known StVZO standard sets strict requirements for factors such as light distribution, light output, and glare prevention. As a result, many high-quality lighting systems are developed in accordance with these guidelines.

France also has specific homologation requirements, with a strong focus on visibility and road safety. The emphasis is not only on the amount of light produced, but also on how that light is used within traffic environments.

These differences highlight the importance of developing lighting solutions that take diverse European market requirements into account from the very beginning of the design process.

Developed with compliance at its core

At Allegion, compliance is not viewed as a final checkpoint but as the starting point for product development.

As a result, the portfolio includes:

- Lighting that complies with StVZO requirements
- Products with additional approvals for specific European markets
- Solutions developed according to strict optical standards
- Beam patterns designed for optimal visibility without unnecessary glare

This creates a product range that aligns with both current and future market requirements.

Greater focus on light quality

The discussion around bicycle lighting is becoming less focused on lumens alone and increasingly centered on light quality. Several aspects are gaining importance across both traditional bicycles and e-bikes, including:

- Controlled light distribution
- Anti-glare technology
- Visibility from multiple angles
- Efficient energy consumption
- Performance at higher speeds

The continued growth of the e-bike segment is accelerating this development in particular. Higher riding speeds require lighting solutions that go beyond light output alone and focus on delivering a predictable, comfortable, and safe beam pattern.

European Battery Regulation sets a new standard

In addition to lighting regulations, increasing attention is being paid to the power sources used in bicycle lighting.

The European Battery Regulation (2023/1542) introduces new requirements for rechargeable products across the European Union.

From February 2027 onwards, portable batteries must be user-replaceable, leading to the gradual phase-out of closed systems with non-replaceable batteries. Stricter requirements are also being introduced for battery labeling and product information.

USB-C is also becoming the standard for rechargeable lighting. That is why our new product range is fully equipped with USB-C connectivity, providing easier charging and greater convenience for users.

Ready for the future

The future of bicycle lighting is shaped by more than technology alone. Regulations, safety, sustainability, and user experience are becoming increasingly interconnected. By incorporating these developments early in the product development process, lighting solutions can be created that meet today's requirements while remaining prepared for the expectations of tomorrow.

Shelve advice

An AXA BIKE shelve advice makes your shop professional, well organised and helps your consumer to decide faster and to make the right choice. AXA BIKE has shelve advice for each store. We are pleased to share the success examples with you personally.

Workplace shelve

Chain locks display

How do you get the best return from your shelf space?

- Optimal selection for your shop
- Clear and clarity for consumers
- Shelve advice based on expected revenue and return
- Right facings per category
- Easy up-sell opportunities
- Order list per shelf

Foldable display

Optimal presentation of AXA BIKE products

AXA BIKE offers a variety of display modules, such as the Fold Ultra display and the USB rechargeable lights display, so that consumers in your store can see the products without packaging. This will stimulate upselling and gives the consumer a good sense of the products. Different holders and wobblers can help imagine the products in the shelf.

Quick delivery

At AXA BIKE you are assured of a fast and reliable delivery. We strive to place your shelf within two weeks.

Watch more tips and advice

Do you want to know how to adjust the code of a code lock, or do you want extra information about one of our product, watch one one of our video's below. In addition have videos with tips for securing your bike and in which the difference in lights is explained.

If you are interested to show the videos on your own website please contact your accountmanager or the sales support department at **+31 (0)318 536 220**.
We can send you the original video.

Would you like to find out more about what we offer?

Just take a look at the back of this brochure. There you will find all our contact details, such as our telephone number, e-mail address and website. We are ready to answer all your questions and help you. So don't hesitate to contact us. We look forward to hearing from you!

AXA Workshop boxes

Efficient and eco-friendly

The AXA workshop boxes offer a practical solution for every bicycle mechanic.

The boxes are filled with a large number of products without individual consumer packaging. Ready for direct mounting on the bicycle. This not only saves unnecessary packaging waste, but most of all, a lot of unpacking!

7% DAP discount

Product index 67

AXA BIKE is inextricably linked to cycling culture. With over 120 years within the bike industry we know exactly what practical cyclists need to travel safely and confidently.

AXA BIKE provides these cyclists with the reassurance of dependable safety and security, allowing them to focus on what matters most without worries, such as fear of theft, damage or accidents.

Our roots are important to us, which is why we are holding on to our European factories. Thanks to that, AXA BIKE can always guarantee consistently high quality. In this way, AXA BIKE contributes to the safety and enjoyment of the globally growing group of people who embrace cycling as a healthy and sustainable mode of transport be it in daily commuting or leisure activities.
